Art Unit: 2827

DETAILED ACTION

1. Amendment filed on 02/08/2007 has been entered.

2. Claims 1-20, 22-26 are presented for examination.

Response to Arguments

3. Applicant's arguments with respect to claims 1-20, 22-26 have been considered but are most in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

5. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Au et al. (U.S. Patent No. 6,546,461).

Regarding claim 1, Au et al. disclose an IC (Figure 1) comprising:

Application/Control Number: 10/065,212

Art Unit: 2827

a memory cell array (Figure 1, 40) having a plurality of memory cells, wherein each memory cell includes at least a first port and at least a second port (Column 4, lines 16-17), the first and second ports of the memory cells forming at least first and second access ports of the memory cell array for accessing the memory cells (Column 3, lines 10-20);

a cache memory (Figure 1, 30) coupled to said first and second access ports, wherein during a read operation to the memory cell array to obtain read data through one of said first and second access ports (Column 3, lines 58-63), the cache memory provides the read data if the read data is contained therein (Column 4, lines 39-52, in operations of reading in first page of data from cache, meaning cache contains read data) or the memory cell array provides the read data if the read data is not contained in the cache memory (Column 4, lines 52-60, if the page of next-to-read data is available, data write to cache from memory device, Figure 9, Column 8, lines 30-67, Column 9, lines 1-28, cache memory provides read data if read data available for reading Column 8, lines 60-61);

a refresh control circuit (Column 1, lines 25-45) for performing refresh operations for said memory cells.

Allowable Subject Matter ...

6. Claims 2-20, 22-26 are allowed.

Claims 2-20, 22-26 include allowable subject matter since the prior art made of record and considered pertinent to the applicant's disclosure does not teach or suggest

the claimed limitations. Au et al. (U.S. Patent No. 6,546,461), and others, does not teach the claimed invention having an IC wherein said cache memory comprises a tag portion, an address portion, and a data portion corresponding to each other, wherein said tag portion indicates if said corresponding address and data portions contain valid address and data values, and wherein during a conflict between a read operation to the memory cc]. I m-ray and a refresh operation, the cache memory provides read data if the read data is contained there or the read operation is stalled until the conflict is over if the read data is not contained in the cache memory.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thong Q. Le whose telephone number is 571-272-1783. The examiner can normally be reached on 8:00am-5:00pm M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Zarabian Amir can be reached on 571-272-1852. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information

system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
